

## Project 5: JavaScript Events

Copy and paste the following code into your text editor and save it as **project5.html** then open it in a web browser.

```
<!DOCTYPE html>
<html>
  <head>
    <meta charset="utf-8">
    <title>Project 5</title>

    <style>
    </style>
  </head>
  <body>

    <h1>Project 5</h1>

    <p id="myparagraph"></p>

    <button id="filltext">Make text appear</button>

    <script type="text/javascript">
      var msg = "Hello World!";

      // Select the button we have by ID. The variable 'button' represents
      // the button and all information associated with it.
      var button = document.getElementById('filltext');

      // When 'button' is clicked, run this function.
      button.onclick = function () {
        document.getElementById('myparagraph').innerHTML = msg;
      };
    </script>
  </body>
</html>
```

### Challenge:

- Create 3 buttons on your page that each will change the contents of the <p> tag to 3 different messages.
