

Project 2: Use CSS to change style

Start with what you've created with Project1, and you should have a web page ready to go. We're going to use the <style> tag to make the heading smaller, change the color of the paragraph text, and add a footer to your web page.

```
<!DOCTYPE html>
<html>
  <head>
    <title>Project 1</title>
    <style>
      h1 {
        font-size: 14pt;
      }
      p {
        color: #FFAAAA;
      }
      .footer {
        font-size: 8pt;
      }
    </style>
  </head>
  <body>
    <h1>Project 1</h1>
    <p>
      This is my first project.<br>
      I use <a href="http://www.google.com/">Google</a>.
    </p>

    <p class="footer">
      &copy; 2013 yournamehere
    </p>

    <script>
    </script>
  </body>
</html>
```

Your challenge:

- Put your name in the footer where it says "yournamehere"
- Change the pink text to a blue color
- Change the footer's text to a green color
- Put a border around the footer
