Project 1: Make a Web Page

Web pages are just text documents with HTML inside them. In your text editor, create a new document and save it in safe place as "project1.html". Place the following text inside:

Note: Each indent is one <tab> key.

```
<!DOCTYPE html>
<html>
     <head>
          <title>Project 1</title>
          <style>
          </style>
     </head>
     <body>
          <h1>Project 1</h1>
          <p>
               This is my first project.<br>
               I use <a href="http://www.google.com/">Google</a>.
          </p>

          <script>
          </script>
     </body>
</html>
```

Your challenge:
- Change the title and heading to anything different
- Make the link on the page go to a website of your choice
- Make two breaks appears between the two lines of text in your <p> tag.
